

# project-state-suite

*Know what your company is responsible for. Always.*

How long does it take your company to answer — with confidence — **what are we working on right now?**

## THE PROBLEM

Most companies accumulate work faster than they can make it visible. Deliverables fall through the gaps between projects. Prospects go cold because nobody followed up. Operational work becomes invisible until it fails.

Existing tools are optimized for depth inside one project. None of them are optimized for breadth across the whole portfolio. That gap is what project-state-suite closes.

## WHAT IT IS

A structured intelligence system that gives you a single, always-current view of everything your company is responsible for — organized into four types of work:

- ◆ **Projects** Defined scope, defined end, milestone tracking
- ◆ **Prospects** Pre-commitment bids and opportunities
- ◆ **Operational streams** Ongoing work with no close date
- ◆ **Concerns** Cross-cutting risks and issues

## HOW IT WORKS: A THREE-LAYER INTELLIGENCE STACK

01

### Signal layer

#### work-state

Automatically harvests activity from GitHub, Gmail, Slack, and Google Drive. Answers: what has been touched, and by whom.

02

### Execution layer

#### project-state

Deep per-project management: milestones, phase gates, funder reporting, meeting packs, IP tracking, document curation.

03

### Portfolio layer

#### docket-state

Company-wide register of all work. Every project, prospect, stream, and concern in one view. Reads from the layers below — never duplicates.

## AI-native

Morning briefings, intake, reporting, and deliverable roll-ups are handled in conversation — no forms, no dashboards to maintain.

## Files, not platforms

All state lives in human-readable YAML. Diffable, portable, version-controlled. No vendor lock-in. You own your data.

## Grows with the work

A prospect can become a project can become a fully governed initiative — without changing its identity in the docket.

## One view of all work

Projects, prospects, operations, and concerns in a single company board — updated from conversation, not from a form.

## Every deliverable, one list

A flat roll-up of everything due, across every entry, date-sorted. No more chasing individual project trackers.

## Confidence in the morning

A daily briefing that surfaces what needs attention — at-risk entries, overdue reviews, upcoming deadlines — in under two minutes.
