

AN INVITATION / ATOMIC 47 LABS / MAY 2026

Know what your company is responsible for. *Always.*

We're inviting a small group of companies to test-drive project-state-suite — a structured intelligence system that gives leadership a single, always-current view of every project, prospect, operational stream, and concern. Free during the program, with hands-on setup and direct access to the team building it.

[Apply to test-drive →](#)

~10 minutes • selective but welcoming

How long does it take
you to answer — *with
confidence* — what your
company is working on
right now?

The honest answer,
for most companies,
is *longer than it should be*.

Email threads.
A spreadsheet from March.
Three project tools.
Institutional memory.
A couple of Slack DMs.

Most companies accumulate work faster than they can make it visible. Email threads, spreadsheets, project tools, and institutional memory combine into a picture of the portfolio that is always incomplete, always stale, and never in one place.

Existing tools are optimized for depth *inside* a single project — Gantt charts, kanban boards, milestone trackers. None of them are optimized for breadth *across* the entire company's portfolio. That gap is what project-state-suite closes.

i. Deliverables fall through the gaps between projects.	ii. Prospects go cold because no one followed up.
iii.	iv.

Operational work becomes
invisible until it fails.

Leadership cannot answer
"what are we working on" with
confidence.

A three-layer *intelligence stack*, built on plain files.

Three distinct layers, each with a clear purpose and a clear data owner. Information flows *upward* only: signal feeds the docket, project state feeds the docket, and the docket reads — but never duplicates — what the layers below it own.

01
SIGNAL

work-state

~/.work-state/

Harvests activity from GitHub, Gmail, Slack, and Google Drive into a structured, personal activity log. It does not interpret — it records.

ANSWERS — *what has been touched, and by whom?*

```
# ~/.work-state/2026-05/events.yaml
- source: github
  ref:    a47/pss-docket@4f1c
  who:    david
  at:     2026-05-04T08:14Z
- source: gmail
  thread: "PIC Q2 claim — review"
  who:    funder@...
  at:     2026-05-04T07:22Z
```

02
EXECUTION

project-state

./.project-state/

Deep per-project management: milestones, phase gates, decisions, risks, document curation, IP tracking, funder reporting,

```
# .project-state/manifest.yaml
name:    PIC-2024-Hydrology
phase:   delivery
health:  green
milestones:
- id:     M3-fieldwork
  pct:    62
  due:    2026-06-14
- id:     M4-claim-q2
  pct:    10
  due:    2026-06-30
```

	meeting packs. ANSWERS – <i>how is this project actually going?</i>	
03 PORTFOLIO	docket- state ~/.docket- state/ Company- wide register of all work. Every project, prospect, operational stream, and concern in one view — updated from conversation, not from a form. ANSWERS – <i>what is the company responsible for?</i>	<pre># ~/.docket-state/entries/ - type: project name: PIC-2024-Hydrology health: green # ← read up - type: prospect name: Coastal-survey-bid stage: proposal - type: stream name: Client-support health: amber - type: concern name: Field-team-capacity severity: high</pre>

signal → execution → portfolio

information flows upward • authority
flows down • no layer writes back

Confidence in the morning, in *under two minutes*.

The docket-orchestrator surfaces what needs attention — at-risk entries, overdue reviews, deliverables due in the next fourteen days — in conversation, not in a dashboard you have to remember to open.

► DOCKET-ORCHESTRATOR

MON • 04 MAY • 08:32

portfolio • 11 active entries • 9 green • 1 amber • 1 red

needs attention →

- Field-team-capacity — concern severity raised to high
- Client-support — not reviewed in 18 days (cadence: weekly)

due in 14 days →

jun 14 • M3-fieldwork PIC-2024-Hydrology
jun 18 • proposal-send Coastal-survey-bid
jun 30 • M4-claim-q2 PIC-2024-Hydrology

► shall i draft the steering-committee pack for thursday?

We're looking for
companies who feel the
portfolio gap, not the
project gap.

◆ *A good fit if...*

You run roughly **10–50 people** across multiple concurrent engagements — R&D-heavy companies, consultancies, or technical operators.

You have **at least 5 active projects**, and at least one prospect or ongoing operational stream that lives mostly in your head.

Your tools today include some mix of **GitHub, Gmail, Slack, and Google Drive** — the four sources we currently harvest.

A founder, COO, or technical operator can **commit about 30 minutes a week** for the first six weeks: setup, weekly reviews, and candid feedback.

You're comfortable with **files as a source of truth**. YAML doesn't scare you. Diffable, portable data sounds like a feature, not a chore.

◇ *Probably not yet if...*

You're a single-product team running one engagement. A good project tool will serve you better than a portfolio layer.

You need a polished, hosted SaaS with SSO and procurement paperwork. We're early; we'll get there.

You can't spare the time for weekly conversations during the program. The system rewards a small, sustained input — but it does require it.

You want a CRM, a task manager, or a Gantt chart. project-state-suite is none of those.

– 01

Free through the program.

No fee. No commitment beyond the six-week program window. Lifetime founder pricing if you continue afterward.

– 02

Hands-on setup with the team.

We come in, scaffold your docket alongside you, and tune the harvesters to your tools. This is not a self-serve install.

– 03

A direct line to *shape* the product.

Weekly conversations with David and the team. The packs, fields, and views you need will get built — and they'll ship.

Built at Atomic 47 Labs, for the way *real* *companies* actually work.

Files, not platforms.

YAML as source of truth.

Human-readable.

Diffable. Portable.

Version-controlled.

No vendor lock-in.

You own your data.

Atomic 47 Labs is a small R&D studio. We run grants, services, and our own product work side by side — which means we spent more time than we'd like to admit asking ourselves the question this product answers.

project-state-suite is the system we built to stop losing track of our own work. It's now mature enough that we believe it'll work for companies who look like us — small enough that the CEO still knows everyone's name, and complicated enough that nobody can hold the whole portfolio in their head.

The design partner program is how we make sure the next layer — the docket — gets built right. We're being deliberate about who joins. If that's you, we'd genuinely like to hear from you.

David

ATOMIC 47 LABS • FOUNDER

david@atomic47.co

Tell us about your *portfolio*.

Ten minutes, at most. Required fields are marked. We read every application personally — David replies within three working days, either to schedule a 30-minute conversation or with a candid note about fit.

- COHORT OPENS • SUMMER 2026
- COHORT SIZE • ~8 COMPANIES
- FREE DURING PROGRAM • LIFETIME FOUNDER RATE
- REPLY WITHIN 3 WORKING DAYS

COMPANY NAME *

Atomic 47 Labs

YOUR NAME *

Jane Doe

YOUR ROLE *

COO / Founder / Head of Ops

COMPANY SIZE *

1-9

10-24

25-49

50-99

100+

Roughly. Headcount including contractors.

ACTIVE PROJECTS RIGHT NOW

optional

e.g. 8

A rough count is fine – count anything you'd describe as 'a project'.

TYPES OF WORK YOU'D WANT TRACKED

optional

+ Projects

+ Prospects / bids

+ Operational streams

+ Cross-cutting concerns

Pick any that apply. We're curious which axes are alive in your portfolio.

WHAT WOULD 'ALWAYS KNOW WHAT WE'RE WORKING ON' UNLOCK FOR YOU?

optional

Right now, my honest answer to 'what are we working on' is...

A sentence or two is plenty.

We read every application. Three working days, max.

Submit application →
